SUMMARY

BNSP-certified Junior Web Developer and SMK Telkom Malang graduate with fullstack experience building web applications using Next.js, Laravel, TypeScript, Express.js, and Prisma ORM. Rated Competent in DOT Indonesia's Fullstack Developer assessment, with hands-on experience developing responsive dashboards, RESTful APIs, role-based authentication systems, and AI-integrated applications through real-world projects.

PROJECTS

Rail Booking System

[View on GitHub](#)

Tech Stack: Next.js, TypeScript, Tailwind CSS, Express.js, Prisma ORM, MySQL, Git, GitHub

- Developed a fullstack railway ticket booking application with separated frontend and backend repositories to improve project structure and maintainability.
- Built core booking features including train schedule search, multi-passenger booking, seat selection, customer dashboard, and admin CRUD management.
- Implemented backend APIs using Express.js with controller-route architecture, async/await handling, validation logic, and standardized JSON responses.
- Designed database models with Prisma ORM and MySQL to manage users, train schedules, bookings, passengers, seats, and role-based access.
- Practiced real-world development workflow using Git branching, GitHub issue tracking, feature documentation, debugging notes, and conflict resolution.

SIAKAD

[View on GitHub](#)

Tech Stack: PHP, Laravel, Blade, Tailwind CSS, SQLite, Eloquent ORM, Git, GitHub

- Developed a role-based academic information system supporting three user roles (Head Admin, Teacher, Student) for attendance tracking, billing, and user administration.
- Built core features including bulk attendance recording, student attendance statistics, tuition bill management, and full user CRUD with role assignment.
- Implemented authorization using Laravel Policies and custom middleware to restrict access and actions based on user roles across all application layers.
- Designed a service-layer architecture (MVC + Service Layer) to separate business logic from controllers, improving code readability and maintainability.
- Enforced data integrity through database-level unique constraints, soft deletes, and restrict-on-delete foreign key rules to prevent orphaned records.
- Practiced real-world development workflow using Git version control, Laravel FormRequest validation, and Blade component-based UI structuring.

Poly Chat

[View on GitHub](#)

Tech Stack: React, TypeScript, Express.js, Tailwind CSS, Vite, Zod, OpenRouter API, Git, GitHub

- Developed a fullstack AI chatbot application integrating multiple LLM providers (OpenAI, NVIDIA, Google) through a unified conversational interface.
- Built core features including real-time streaming AI responses, model switching, conversation management, and markdown-rendered chat messages.

- Implemented backend APIs using Express.js with a pluggable provider adapter pattern, enabling new AI providers to be added with minimal code changes.
- Designed request and environment validation using Zod schemas to ensure runtime type safety across all API endpoints.
- Practiced real-world development workflow using Git version control, structured logging with Pino, and rate-limiting middleware for API protection.

EXPERIENCE

PT Kadelmindoo Saraya Mapan

[View Credentials](#)

IT Support Intern | 2025

- Supported Odoo ERP implementation, configuration, and customization, including WordPress-based solutions to improve business operational and marketing processes.
- Managed and validated business data migration from Beecloud to Odoo ERP, ensuring data accuracy and consistency across platforms.
- Collaborated with internal teams to analyze operational requirements and support dashboard development and reporting processes.
- Provided technical support and troubleshooting for internal users, and prepared technical documentation, SOPs, and training materials to support knowledge transfer.

CERTIFICATIONS

Junior Web Developer (BNSP, 2025).
